

As a leader in digital trust, identity verification & fraud prevention solutions, we are constantly keeping up with cyber threat trends leading to new innovation to enhance our current offerings. Here are a few ideas which may complement your current use case with us.

# FAST TAP MFA

## Update your OTPs to Fast Tap MFA

Fully brandable, web-based MFA with fewer clicks than OTP. Compares phone against desktop session to pinpoint account takeover attempts.

### User Experience

- Total of 2 clicks
- No memorizing or typing in passcodes
- Fully brandable for user to stay in your immersive experience, including colors, logos, text, SMS wording, and DNS

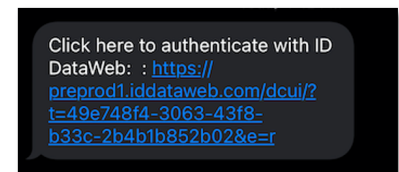

### Security:

- Device, location, network, behavior risk analysis
- Proximity check (protect against phishing attacks)
- TOR / High risk VPN detection
- BOT detection
- Device fingerprinting (remember device)

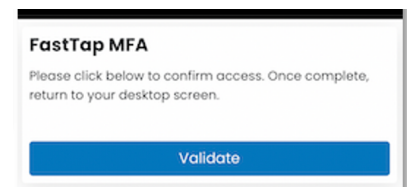

## BENEFITS

- Increased security preventing phishing attacks
- Higher security against sim swap/port attacks
- Improved user experience by lowering friction
- Increased accuracy with fewer re-try rates
- Lower drop off from user frustration

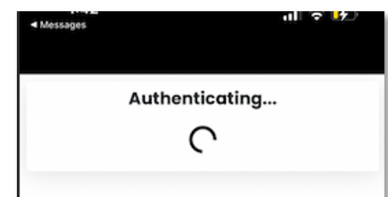

### 1. Click SMS link

### 2. Click Validate
